

Define Problem Statements

Date	03 October 2026
Team ID	FITBUDDY-TEAM
Project Name	FitBuddy – AI Fitness Plan Generator using Gemini Models
Maximum Marks	3 Marks

Step 1: Problem Identification

S.No	Problem Statement	Affected Users	Impact
1	Beginners often receive generic workout routines that do not reflect their goal, age, weight or preferred intensity.	Fitness beginners and general users	Low personalization and inconsistent adherence
2	Updating a workout plan after receiving feedback usually requires manual redesign.	Users following changing routines	Plans become difficult to maintain
3	Workout guidance and basic nutrition/recovery advice are often separated across different resources.	Users planning their own fitness journey	Fragmented experience
4	Users need a simple way to retain their profile and generated plans.	Returning users	Repeated data entry and loss of previous plans

Step 2: Selected Problem

How can an AI-powered web application generate a personalized seven-day fitness plan and adapt it from user feedback while keeping the experience simple and persistent?

Step 3: Project Objective

FitBuddy addresses this problem by collecting basic user fitness information, using Gemini through a FastAPI backend to generate a structured plan, providing a nutrition/recovery tip, calculating BMI, and allowing the user to request an updated plan through feedback.

Team Responsibility

Dinesh N leads the backend problem framing; Afraar M focuses on the user experience; Deepak B focuses on the AI solution; Vinesh D focuses on validation, persistence and testing.
