| <b>Date</b>          | 03 October 2026                                          |
| <b>Team ID</b>       | FITBUDDY-TEAM                                            |
| <b>Project Name</b>  | FitBuddy – AI Fitness Plan Generator using Gemini Models |
| <b>Maximum Marks</b> | 2 Marks                                                  |

## Demo Plan

---

### Preparation

- Verify Python environment and required dependencies.
- Configure Gemini API key through environment variables.
- Start the FastAPI/Uvicorn server.
- Prepare one sample user profile and one realistic feedback example.

### Demo Order

1. **Introduction – Dinesh N:** problem and objective.
2. **User Interface – Afraar M:** registration/login and fitness input.
3. **AI Generation – Deepak B:** seven-day workout and nutrition/recovery output.
4. **Adaptation – Deepak B:** submit feedback and show revised plan.
5. **Data & Validation – Vinesh D:** BMI, stored data and validation/error behavior.
6. **Closing – Dinesh N:** architecture and future scope.

### Backup Plan

Keep a pre-generated example available if the external Gemini service is unavailable during the demonstration. Do not expose the API key on screen.
